

Established in 1950, Viganò Pavitex has been active in the geosynthetics market for many decades, developing considerable experience in the sector. It has two departments, one of which produces geosynthetics for the public sector, the other offers textile floor coverings for industrial and sporting uses, and offices. The company is located in Curno, northern Italy, in the province of Bergamo, and has more than 50 employees.

Viganò Pavitex has grown considerably, consolidating its unique flexibility as well as its technical and commercial dynamism, based on modern equipment and up-to-date managerial techniques. Its quality management system obtained ISO 9001 certification in 1996. It has developed a wide range of geosynthetics (nonwoven and woven geotextiles, geogrids, drainage geocomposites, geomats and biomats) to meet the demands of the construction sector, in particular:

- Geotextiles and geocomposites for geotechnical applications and environmental engineering.
- Geotextiles and geocomposites for waterproofing systems.

Their main products are a wide range of UV-stabilized HT polypropylene non-woven geotextiles and other fibers such as PET, drainage geocomposites, geomats with and without reinforcement, woven geogrids and woven geotextiles.

Viganò Pavitex also conducts sustainability studies (LCA, EPD) on its products to ensure it has the latest knowledge to make continuous improvements to reduce their environmental impact.

Thanks to its experience in the sector, a dynamic technical assistance service and a flexible sales network, Viganò Pavitex says it can provide complete solutions for all needs by supporting and advising customers on the most sustainable solution from an environmental, qualitative and economic point of view, and directing customers towards the most sustainable solution from an environmental, qualitative and economic point of view.

Viganò Pavitex has been an IGS member for more than 20 years and actively participates in events. The company has always been committed to supporting sustainability and technical initiatives.

The company says its association with and participation in the IGS gives it international visibility, and is an indication of product quality and professionalism. Viganò Pavitex believes the IGS offers its members an innovative and up-to-date view of geosynthetic products with constant updates on new technologies and sustainable approaches. It also offers ideas for technical improvement, and the opportunity to get involved in sustainability initiatives by sponsoring studies and initiatives that demonstrate the positive environmental impact of geosynthetics in the modern world of building materials.
