

The Pietrucha Group is a Polish family business founded in 1960, with three manufacturing plants in Poland and the Philippines.

It specializes in the manufacture and distribution of geosynthetic products used in civil engineering to construct flood-protection and water retention structures, regulate embankments of rivers and water reservoirs, and in infrastructure projects related to road, airport and railway construction.

The company offers solutions and services to customers in more than 40 countries on five continents, especially in regions sensitive to the impact of climate change. Its products include a wide range of vinyl and hybrid sheet piles, geogrids and geocomposites, as well as modular flood-protection systems.

Pietrucha joined the IGS in 2012 and was proud to exhibit at the 7th European Geosynthetics Conference, or EuroGeo7, in its home country of Poland in 2022.
